DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 14 and 15, drawn to a nematic discotic phase liquid crystal (LC) composition wherein said composition is a polymeric discotic LC formed by polymerization of a polymerizable discotic LC compound, classified in class 349, subclass 167.
- II. Claims 1-13 and 16-27, drawn to a LC device, LC apparatus, or LC composition wherein the LC material need not be a polymeric discotic LC formed by polymerization of a polymerizable discotic LC compound, classified in class 349, subclass 117.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the LC material need not be a polymeric discotic LC formed by polymerization of a polymerizable discotic LC

Art Unit: 2871

compound. The subcombination has separate utility such as LC composition for use in a polymerizable coating.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Group II contains claims directed to the following patentably distinct species of the claimed invention:

Species A, claim 24, drawn to a LC device with a light absorbing plate behind the device.

Species B, claim 25, drawn to a LC device with a reflection plate behind the device.

Species C, claim 26, drawn to a LC device which is a projection-type device.

Currently, claim 23 is generic to Species A and B. Claims 1-13, 16-22, and 27 are generic to Species A, B, and C, however, Species A, B, and C have the following sub-species:

Species 1, claim 20, drawn to a LC device wherein the alignment directors of the discotic LC and rod-shaped LC are directed in an identical direction.

Art Unit: 2871

Species 2, claim 21, drawn to a LC device wherein the alignment directors of the discotic LC and rod-shaped LC are perpendicular.

Applicant is required under 35 U.S.C. 121 to elect Group I or to elect a single disclosed species of Group II (A, B, or C) along with one sub-species (1 or 2) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 2871

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
